Dietary Intervention to Investigate Vascular Functions in African-American women

The Clinical Research Center
at the Morehouse School of Medicine

- ✓ **Invites all African American women between the ages of 18-45 years to voluntarily participate in a clinical trial**
- ✓ **The study will test how your diet affects your blood vessels and risk for chronic heart disease**
- ✓ **You can join this study if you are healthy and lean or obese and insulin resistant**
- ✓ **Qualified patients may be enrolled for up to 5 months in the clinical trial**

PARTICIPANTS WILL RECEIVE:

- Health-related questionnaire
- Dietary questionnaire and analysis
- Study-related physical examination and echocardiogram
- Study-related laboratory tests
- Compensation for time and travel
- Or you may receive study-related diet
